Exercise A

1/ Memory diagram of

Point 1:

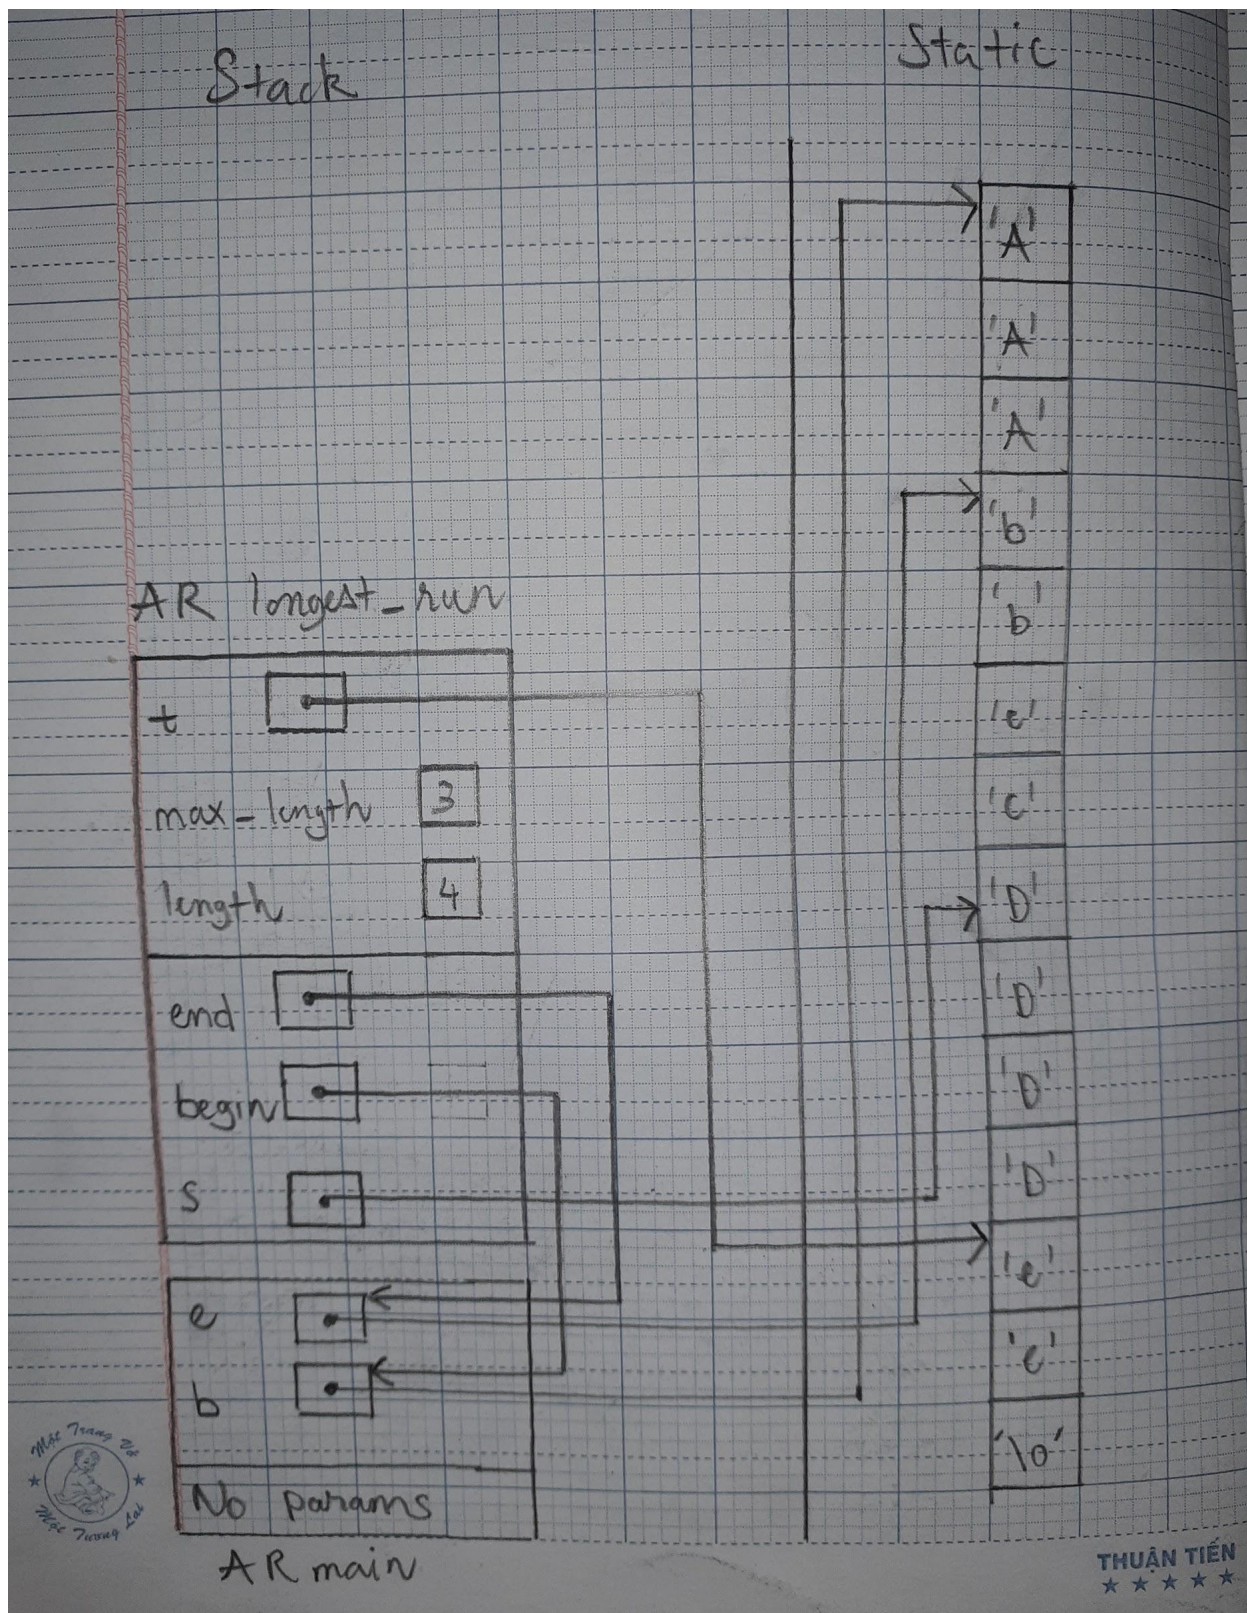

Point 2:

2/

Memory diagram of the third time the program reaches point 1

Exercise D

Code:

```
95 void sort_strings(char **s, int n)
96 {
97     // Replace this comment with code that uses insertion sort
98     // to properly rearrange the elements of an array of pointers.
99     int outer = 1;        // index to control outer loop
100    char *eti;             // short for "element to insert"
101    int i;                 // index to control inner loop
102    while (outer < n) {
103        eti = s[outer];
104        i = outer;
105        while (i != 0 && (strcmp(s[i - 1], eti) > 0)) {
106            s[i] = s[i - 1];
107            i--;
108        }
109        s[i] = eti;
110        outer++;
111    }
112 }
113
114
```

Output:

```
monsi@LAPTOP-M9ONH6KV ~/ENCM_335/1ab10
$ ./a.exe
